Attendance

a. If attendance is open, you can take attendance with the method determined by the academic.

b. If you want to take attendance with CBN, the user is first asked for permission to take location, then the student can be included in the attendance as long as the student is in the class where the attendance is taken.

Attendance

c. If you are taking attendance with a passcode/password, the field where you can enter the passcode/password opens, you enter the password and you are included in the attendance.

Attendance

The lecturer can create attendance with QR code from the web. When the student wants to log in to the attendance created with the QR code, the camera opens, the student can scan the QR code and participate in the attendance.

And you can understand that you are successfully included in the attendance from the notification that appears.

Thank you!
